

## User Story

**As a user, I want to make secure payments using points so that I can complete my transaction successfully and receive confirmation.**

## Functional Testing

- Verify user can successfully make a payment.
  - Verify payment is processed successfully with valid payment details.
  - Verify transaction is recorded in the system after successful payment.
  - Verify system generates a unique transaction ID for each payment.
  - Verify payment status updates correctly (Pending, Successful, Failed).
  - Verify user can cancel payment before final confirmation.
- 

## UI Testing

- Verify payment page loads correctly.
  - Verify all payment fields and buttons are displayed correctly.
  - Verify payment summary displays the correct total amount.
  - Verify success and failure messages are displayed clearly.
  - Verify confirmation screen appears after successful payment.
  - Verify payment page is responsive across devices and screen sizes.
- 

## Validation Testing

- Verify required fields cannot be left empty.
  - Verify invalid payment details are rejected.
  - Verify expired or incorrect payment details trigger validation errors.
  - Verify duplicate payment submissions are prevented.
  - Verify system handles interrupted or timed-out payment attempts correctly.
- 

## Security Testing

- Verify only authenticated users can access payment functionality.
  - Verify unauthorized payment requests are blocked.
  - Verify payment information is securely handled and stored.
  - Verify transaction activity is logged for auditing purposes.
- 

## Error Handling

- Verify appropriate error message is displayed when payment fails.

- Verify system handles server or payment gateway errors gracefully.
  - Verify transaction is not processed when payment fails.
- 

## **Acceptance Criteria**

- User can complete payment successfully with valid details.
- Payment status updates correctly after transaction completion.
- User receives confirmation after successful payment.
- Invalid or failed payments display appropriate error messages.
- Payment records are stored securely and can be retrieved when needed.
