

User Acceptance Tests (UAT)

User Story 1: As an admin, I want to export analytics reports as CSV or PDF, so that I can submit or share platform performance evidence.

UAT: Given I am a logged-in admin on the dashboard, when I click on the "Export CSV" or "Export PDF" buttons, then the system should immediately trigger the corresponding file downloads without displaying any raw HTML errors.

User Story 2: As an admin, I want to view trade facility utilisation reports, so that I can understand how much of the slot capacity is being used.

UAT: Given I am a logged-in admin on the dashboard, when I scroll to the Trade Facility Utilisation section, then the system should display an accurate slot utilization percentage card and a dual-colored vertical bar chart comparing booked slots against total capacity.

User Story 3: As a seller, I want the system to suggest a reasonable item price using South African consumer price data, so that I can list my item at a fair price.

UAT: Given I am a logged-in seller on the creation form, when I select a category and an item condition, then the system should instantly display a market-aligned price advisory string and autofill the price input field.
